Projects

- **First Semester**
  - **Name:** Restaurant Management System.
  - **Description:** It was a console based project to manage various food items and orders placed by the customers and then generate their bills. The concept of **filing** is used to store data about food items and the orders.
  - **Technology:** C++, File.

- **Second Semester**
  - ➢ **Name:** School Management System(SMS)
  - ➢ **Description:** It was a web based project. It was basically a university CMS type project. Teacher can upload lectures, result and mark student attendance online and students can also see their results from their accounts. Students can also give remarks about a certain subject or teacher which can only be seen by Principle.
  - ➢ **Front-End:** HTML5, CSS, Bootstrap, JavaScript.
  - ➢ **Back-End:** Php
  - ➢ **Server:** Xampp.

- **Third Semester**
  - ➢ **Name:** Product Management System
  - ➢ **Description:** It was a web based project. It was used to store and update products of a utility store. A customer could see which products are available in the store. Store manager can update the products as well as add new products for customer to see.
  - ➢ **Front-End:** HTML5, CSS, Bootstrap, JavaScript.
  - ➢ **Back-End:** ASP.Net(MVC)
  - ➢ **Server:** MSSQL Server

- **Final Year Project**
  - ➢ **Name:** Maintenance Port
  - ➢ **Description:** It was a web based project built to enable people to search employees and workers to solve their household problems such as electrician, plumber, mechanic etc. Through this app, both people and workers will be able to search for their needs easily.
  - ➢ **Front-End Technology:** HTML5, Bootstrap 5, CSS 3, JavaScript.
  - ➢ **Back-End Technology:** ASP.Net (MVC), MSSQL Server.
